SUMMARY

Distributed Systems Engineer with 10 years of experience building and operating large-scale cloud systems. Strong background in automation, incident response, and log analysis to diagnose and resolve production issues. Experienced with Python, Kubernetes, and AWS, with a focus on reliability and system performance. Successfully improved test coverage, cost efficiency, and operational reliability across multi-region, high-availability systems serving 1M+ users. Seeking a high-impact, mission-driven role to apply my versatile skill set toward cloud infrastructure, distributed systems, security, or platform engineering.

SKILLS

- *Languages* – Python, Go, Java, SQL, Shell
- *Cloud & Infrastructure* – Kubernetes, AWS, Docker
- *Frameworks & Tools* – CI/CD, REST APIs, distributed systems, automation frameworks
- *Security & Operations* – Incident response, log analysis, anomaly detection, SOAR workflows
- *AI & Tools* – Prompt engineering, LLM workflows, AI-assisted development
- *Distributed Systems* – Microservices, Service mesh patterns, Container orchestration, Scaling, Reliability

Pylon Systems LLC Superior, CO *Owner / Principal Engineer* Feb '26 – Present

- » Founded Pylon Systems and designed Pylonline, a subscription platform for managing self-hosted compute nodes, spanning **6 repositories**, across 4 deployed environments (sandbox, dev, stage, prod) with isolated databases.
- » Architected a serverless control plane on **Cloudflare Workers and D1**, split into **7 role-scoped Workers** (public, auth, admin, payments, monitor, status, webhook dispatcher) backed by 28 SQL migrations across identity, payments, and product domains.
- » Built Pylon, an offline-first Node.js node runtime with Docker orchestration, WebSocket messaging, and heartbeat reporting to the cloud portal for remote monitoring and support access.
- » Implemented secure authentication and integrations: passkeys (WebAuthn), OTP, OAuth, session management, RBAC with audit logging, Stripe billing and webhooks, Resend email, and Google Calendar scheduling.
- » Established CI/CD with **25+ GitHub Actions workflows** for PR checks, per-service test suites, performance runs, and gated dev, stage, and prod deploys with rollback, backed by **380+ automated test files** (unit, API, runtime, Playwright UI).
- » Applied AI-assisted development using domain-scoped LLM agents, architecture docs, and operator runbooks to accelerate delivery while keeping the codebase consistent and maintainable.

Cisco Systems San Jose, CA (Remote) *Senior Software Engineer* July '16 – Nov '25

- » Contributed to the development and operation of a cloud-native distributed system **serving 1M+ users across 20+ AWS regions**, delivering 99%+ uptime and supporting bi-weekly deployments.
- » Created production-grade **Go services** and **Kubernetes controllers** and CRDs, enhancing platform capabilities for system configuration and improving workload orchestration and operational reliability.

- » Supported infrastructure spanning **20+ data centers** with dual-cluster configurations (JIT and non-JIT), each containing hundreds of pods and multi-container workloads (up to 10 per pod), performing regularly scheduled upgrades and maintenance or rolling out new features.
- » Contributed to **15+ shared repositories** and cross-service codebases, coordinating changes, peer reviews, and investigated complex distributed system challenges. Performed audits which provided **technical analysis to inform prioritization** and design decisions, presented feature proposals to stakeholders.
- » Participated in on-call rotation, providing troubleshooting expertise to help **mitigate high-severity production issues under aggressive SLAs** and improved MTTR through detailed incident documentation.
- » Collaborated on cost optimization initiatives resulting in **approximately \$100K/month in cloud cost savings** through resource scaling, deployment tuning, and cross-service efficiency improvements.
- » Participated in testing and deployment planning across **20+ major releases, coordinating with 10+ cross-functional engineering and product teams** in agile ceremonies to ensure alignment and quality.
- » Designed and implemented **1,500+ test cases across 5 products**, bringing up infrastructure as needed, including long-running, stateful system workflows, increasing test coverage, cloud reliability, and reducing customer-visible incidents.

EDUCATION

University of Illinois at Chicago (UIC) – Chicago, IL
Bachelor of Science in Computer Science
Graduated – May 2016
